

## I am worried about the assessment

We understand that the assessment may be upsetting and that you may feel anxious or worried. We will keep you informed of what is happening and will treat you with courtesy and sensitivity.

If you do not understand any part of the process and need further explanation then please ask the professionals involved who can then provide you with more information.

## How can I make a comment about my child's treatment?

The Patient Advice and Complaints Team can help in resolving any concerns you may have in regards to health care. Contact them on 0800 013 0018 or email: [patientadvice@cht.nhs.uk](mailto:patientadvice@cht.nhs.uk)

## Bruising, Burns, Scalds in young babies

## Information for parents and carers

A bruise, scald, burn has been noticed on your baby. This leaflet has been provided to explain the Local Safeguarding Children Partnership's bruising, burns and scalds protocol.

Bruising, burns, scalds in babies who are not crawling or walking is unusual. It is unusual for a baby to get a bruise, burn, scald during everyday activities such as nappy changes, bathing or feeding.

Bruising in particular can be related to a health condition which has not been previously identified.

However, sometimes bruising, burns or scalds in babies are due to a deliberate injury and therefore it is important that each baby is fully assessed to determine the cause.

## What happens now?

Everyone working with children must follow the bruising, burns and scalds protocol (guidance for staff) when they find such a mark in a non-mobile baby (a baby who is unable to move around on their own).

Sometimes, even when children are moving around by themselves, there can be concerns about how a bruise, burn or scald occurred. In these situations a referral should always be made to Children's Services.

1. A referral is made to Children's Services.
2. Your baby's case will be assessed by Children's Services. Part of this assessment involves gathering information from other agencies who may hold information about your family, or who may be working directly with you.

3. A request will be made for an assessment by a paediatrician at your local hospital or community health clinic. This usually happens as soon as possible the same day.

## What will the paediatrician do?

The paediatrician will ask you all about your baby. This will include when the bruise or mark was first noticed and whether you know how the bruise, burn or scald may have happened.

The paediatrician will do a full examination which includes undressing your baby. They will ask for your consent as the parent or carer, to perform examinations or other tests. Once the examination has been completed the paediatrician will discuss the outcome of their assessment with you.

There may be a recommendation that further investigations are required such as taking blood from your baby to ensure there are no underlying health conditions.

In some cases, tests such as X-rays or scans may also be requested to enable the paediatrician to fully assess your baby. These tests can take time and may involve staying in hospital overnight, so it would be helpful to take some provisions with you just in case. When X-rays are required, some of them will need repeating in about two weeks.

The paediatrician will also speak to Children's Services to let them know the outcome of the assessment, and a decision will be made as to whether any further action is needed.
