

Constipation Pathway

Clinical Assessment/Management tool for Children

Primary and Community Care Settings

Priorities of clinical assessment				
History	Examination	Organic causes		
This is the mainstay of diagnosis. Consider with any of the following: <table><tr><td> ▪ Bowels open <3 x per week ▪ Hard or large stools ▪ Blood in stool ▪ Recurrent UTIs </td><td> ▪ Straining ▪ Rabbit dropping/pellet stools ▪ Overflow or reported diarrhoea </td></tr></table> Soiling is a very common presentation of constipation and should be treated as constipation ERIC Bristol Stool Chart	▪ Bowels open <3 x per week ▪ Hard or large stools ▪ Blood in stool ▪ Recurrent UTIs	▪ Straining ▪ Rabbit dropping/pellet stools ▪ Overflow or reported diarrhoea	• Palpate for faecal mass (not always accurate) this should be re-examined after treatment to ensure resolution • Examine anus for position and check patent in infants • Examine spine/lower limb neurology/gait • Check for peri-anal infection (including strep)	• 95% is idiopathic and no investigations are required • Consider organic causes where failure to respond to standard treatment • Hypothyroidism • Coeliac Disease • Cows milk protein intolerance • Hirschsprung (consider if delayed meconium, constipation in first month, or FHx) • Tethered spinal cord (very rare) • Abdominal tumour
▪ Bowels open <3 x per week ▪ Hard or large stools ▪ Blood in stool ▪ Recurrent UTIs	▪ Straining ▪ Rabbit dropping/pellet stools ▪ Overflow or reported diarrhoea			

Assessment Table

GREEN - LOW RISK	AMBER - MEDIUM RISK	RED - HIGH RISK
No red or amber symptoms	Growth and Wellbeing: Faltering growth? Other medical conditions: e.g. cerebral palsy Personal/familial/social factors: Can families put in place treatment plan? - No improvement with effective treatment after 3 months*	Symptoms from birth e.g. delayed meconium - consider Hirschsprung Disease / cystic fibrosis New/undiagnosed weakness in legs - may indicate tethered spinal cord Abdominal distension with vomiting - possible bowel obstruction Safeguarding - concerns about child maltreatment or neglect, e.g. passing or deliberately smearing stool in inappropriate places, peri-anal injury

Action Table

GREEN ACTION		AMBER ACTION	RED ACTION																
Give advice on: - Fluid intake/Diet/Activity for children Positive praise with rewards School toilets Children with Additional Needs Parental Resources: Toilet training ERIC's guide to children's bowel problems - Provide family with written advice – see our page on constipation	If palpable faecal mass, long history, or soiling, Commence Macrogol Disimpaction Regimen Treatment: Primary care-led: Disimpaction: Macrogol (Movicol/Laxido) Start at dose in table depending on age and increase by 2 sachets per day to maximum dose Once stools watery and clear brown, halve dose and continue (drop 1 sachet per day). Continue on maintenance ensuring bowels open daily for at least 3-6 months <table><tr><th>Age</th><th>Disimpaction Start</th><th>Maintenance</th><th>Max Dose</th></tr><tr><td><5 years (paediatric macrogol)</td><td>2</td><td>1-4</td><td>8</td></tr><tr><td>5-12 years (paediatric macrogol)</td><td>4</td><td>1-4</td><td>12</td></tr><tr><td>12+ years (adult macrogol)</td><td>4</td><td>1-3</td><td>8</td></tr></table> Video for families on macrogol use. Please check BNFc / CKS If stools soft but remain infrequent add stimulant laxative	Age	Disimpaction Start	Maintenance	Max Dose	<5 years (paediatric macrogol)	2	1-4	8	5-12 years (paediatric macrogol)	4	1-4	12	12+ years (adult macrogol)	4	1-3	8	- Follow all green actions - If confident parents have already had effective treatment or if any other amber risk factors present discuss with paed's on-call for advice - If doubtful of treatment compliance restart disimpaction and request GP to review in 7-10 days	Refer to paediatrics - Discuss with local on call team about same day referral - If safeguarding concerns, also discuss with EDT
	Age	Disimpaction Start	Maintenance	Max Dose															
<5 years (paediatric macrogol)	2	1-4	8																
5-12 years (paediatric macrogol)	4	1-4	12																
12+ years (adult macrogol)	4	1-3	8
